

## PERFECTINT® POWDER SPF 40 BRUSH CLEANSING GUIDE

Each PerfectTint Powder SPF 40 boxed set contains one brush with two powder cartridges (approximately 60-day supply based on typical use). Applied alone or over makeup, this luxurious powder is formulated for all ages and genders, convenient for daily protection, and on-the-go reapplication.

The antimicrobial brush head is designed to maintain freshness during use. However, the brush head may collect residue from repeated use that could affect flow of powder from the base. If this issue arises, follow these steps for proper brush cleaning and maintenance. It is important to be as gentle as possible while cleaning to ensure the longevity of the brush.

### THE QUICK CLEAN

Remove cap, twist base to extend brush, remove magnetic brush head by gently pinching the brush and pulling in an upwards motion away from the base. Make sure to keep the base of the brush upright to avoid spilling powder.

Dampen a section of a microfiber cloth with a brush cleansing spray. Holding silver magnetic collar of brush head at a 45° downward angle, wipe gently from side to side across the cloth. To ensure all the bristles are cleaned rotate grasp on collar as you clean.

As cloth becomes dirty, dampen another section, and repeat until brush is free of residue. Once clean set the brush down by its collar and allow to air dry (four to five minutes) and reattach brush head to its base.

## THE DEEP CLEAN

Remove cap, twist base to extend brush, remove magnetic brush head by gently pinching the brush and pulling in an upwards motion away from the base. Make sure to keep the base of the brush upright to avoid spilling powder.

Holding silver magnetic collar of brush head at a 45° downward angle, rinse brush head gently under lukewarm water, keeping metal collar dry. Pinch brush between fingers and thumb to release excess water.

Dispense a pea-size amount of a brush cleanser to a damp microfiber cloth. Holding silver magnetic collar of brush head at a 45° downward angle, wipe gently from side to side across cloth, rotating grasp on collar. Continue this process until brush head is free of residue, being careful not to over clean.

Holding silver magnetic collar of brush head at a 45° downward angle, rinse brush head gently under lukewarm water, keeping metal collar dry. Pinch brush between fingers and thumb to release excess water.

Lightly wipe brush head across a dry cloth to absorb excess moisture.

Gently reshape brush head and lay flat on counter, rotating every two hours. Allow bristles to dry completely before reattaching brush head to base (approximately 12 hours). Always lay brushes flat to dry. Do not blow dry as this will severely damage the brush.

Once brush head has dried completely, reattach to base. Your PerfectTint Powder SPF 40 is now ready for use!
